

BARLEY CEREALS

EARLY STAGES

Sample the whole above ground part of the plant. The whole plant is sampled up until tillering begins.

Collect **75 plants** per sample, selected randomly through the sampling area to obtain a representative sample. Avoid distorted or stunted plants in the sampling area. Do not send dried plants.

If you require a Sap 2 or 3 analysis, please collect **twice** as many plants.

If you require a Sap 4 comprehensive analysis, please collect **three times** as many plants.

Monitoring program

Usually a single sample is sufficient from this growth stage.

Additional Notes:

- To ensure that the laboratory is able to perform the entire test suite required and that the optimal levels supplied on the laboratory report are relevant, please ensure that the above instructions are followed.

- Place samples into a plastic sample bag, not in paper, as paper will dry out the sample and may not allow for enough sap to be extracted for the analysis requested.

BARLEY CEREALS

EARLY STAGES

New Vs Old Leaf testing is not available for this crop stage.
