

BARLEY CEREALS

TILLERING

Sample the first fully expanded leaf and sheath with a visible dewlap. This part is sampled up until the flag leaf emerges.

Collect **100 - 150 leaves** per sample, selected randomly through the sampling area to obtain a representative sample. Avoid distorted or stunted plants in the sampling area. Do not send dried leaves.

If you require a Sap 2 or 3 analysis please collect **twice** as many leaves.

If you require a Sap 4 comprehensive analysis please collect **three times** as many leaves.

Monitoring program

Usually a single sample is sufficient from this growth stage.

Additional Notes:

- To ensure that the laboratory is able to perform the entire test suite required and that the optimal levels supplied on the laboratory report are relevant, please ensure that the above instructions are followed.
- Place samples into a plastic sample bag, not in paper, as paper will dry out the sample and may not allow for enough sap to be extracted for the analysis requested.

LEAF WITH VISIBLE DEWLAP

BARLEY CEREALS

DIFFERENTIAL SAP ANALYSIS

New Vs Old Leaf testing is not available for this crop stage.
