

BAMBOO

Take leaves that are about $\frac{3}{4}$ to fully expanded on the latest flush.

Sample at least **100 leaves** through the grove, no more than 6 per bamboo, to obtain a representative sample. If the leaves are small, more leaves will be required. Sample at about shoulder height, at up to three different points around the plant.

Sap 4 comprehensive sap analysis is not available for this crop

Monitoring program

Test as required

Additional Notes:

- To ensure that the laboratory is able to perform the entire test suite required and that the optimal levels supplied on the laboratory report are relevant, please ensure that the above instructions are followed.

- Place samples into a plastic sample bag, not in paper, as paper will dry out the sample and may not allow for enough sap to be extracted for the analysis requested.

FIRST FULLY EXPANDED LEAF

BAMBOO

DIFFERENTIAL SAP ANALYSIS

Sampling for new leaf and old leaf testing:

Take leaves that are about $\frac{3}{4}$ expanded on the latest flush. This will be your NEW LEAF SAMPLE.

Take the old leaves from the same growing stem. This will be your OLD LEAF SAMPLE.

Sample for each sample type through the orchard, no more than 6 per tree (of each sample type) to obtain a representative sample. Sample at about shoulder height, at up to three different points around the tree.
