

# CHIVES

Sample at least **80 whole plants**, after removing the roots, to obtain a representative sample.

The plant part required for testing are the leaf blades.

If you require a Sap 4 comprehensive analysis please collect **two times** as many plants.

### Monitoring program

Most bulb crops can be sampled from the time of bulb formation to last fertigation.

### Additional Notes:

- To ensure that the laboratory is able to perform the entire test suite required and that the optimal levels supplied on the laboratory report are relevant, please ensure that the above instructions are followed.

- Place samples into a plastic sample bag, not in paper, as paper will dry out the sample and may not allow for enough sap to be extracted for the analysis requested.

# CHIVES

**New Vs Old Leaf testing is not available for this crop**
