

FENNEL

Take stems from the top 20 cm of the plant.

Sample at least **80 tops**, randomly across the sampling area to obtain a representative sample.

If you require a Sap 4 comprehensive analysis please collect **two times** as many tops.

Monitoring program

Begin sampling at budding; and monitor fortnightly to mid-harvest.

Additional Notes:

- To ensure that the laboratory is able to perform the entire test suite required and that the optimal levels supplied on the laboratory report are relevant, please ensure that the above instructions are followed.
- Place samples into a plastic sample bag, not in paper, as paper will dry out the sample and may not allow for enough sap to be extracted for the analysis requested.

FENNEL

New Vs Old Leaf testing is not available for this crop.
