

ONION

For spring onions and young onions, garlic or leek, send **160-200 whole plants** after removing the leaf tips and roots. Be sure to include the collar at the base of the leaf, as this is the part to be tested.

For larger plants cut the collar at the top end of the bulb, remove green leaves, and send the collars. **30 - 40 collars is enough.**

No Sap 4 comprehensive sap analysis is available for this crop.

Monitoring program

Most bulb crops can be sampled from the time of bulb formation to last fertigation.

ONION

New Vs Old Leaf testing is not available for this crop.
